

AMERAPEX CORPORATION

Plant IT and Systems Integration

Products and Services:

- Requirements Analysis
- Plant Information Technology Infrastructure
- Process Information Systems
- Interfaces to existing DCS and Plant Systems
- Enterprise Application Integration
- Real-Time Performance Monitoring and Management
- Off-line data collection and analysis for Process Improvements

AMERAPEX provides integrated **Information Technology** for process facilities worldwide including requirements analysis studies, plant IT infrastructure improvements, implementation of plant information systems and custom interfaces to existing plant systems. We also provide Enterprise Application Integration and project management for implementing Real-Time Performance Management Systems as well as services for off-line data collection and analysis. Headquartered in Houston, Texas, **AMERAPEX** supplies expert staff and extensive knowledge in Information Technology and applications including those provided by OSI, AspenTech, Honeywell and others.

AMERAPEX Information Technology

Complete Services for Information Systems and Integration

Plant IT Infrastructure Improvements

Full spectrum of site services capabilities including Implementation of Plant Information Systems, Systems Interfaces and Application Integration

Services provided on lump sum or reimbursable basis

Amerapex provides full scale site services to analyze, evaluate and provide recommendations for improvements to the Plant IT infrastructure. Our team of specialists has the experience to evaluate network and application performance requirements and implement an environment that meets the plant's needs for real-time access to critical data.

Amerapex personnel have the experience and expertise to evaluate requirements for plant information systems and provide implementation services for OSI/PI, AspenTech's IP.21 and other leading process historians. We also provide interfaces to all existing plant DCS, LIMS and other existing legacy systems, regardless of whether the interfaces are based on industry standard OPC or proprietary programming interfaces.

By working with leading Enterprise Application Integration (EAI) software providers, **Amerapex** provides the services to implement enterprise-wide application integration. We analyze the data exchange requirements and implement leading-edge solutions that allow the integration of existing plant information with production management applications (e.g. yield accounting applications) and business systems (e.g. SAP).

Amerapex has full capabilities to provide all engineering, design, project execution and site services giving our clients a single source and fully integrated solution to your systems integration and IT needs. We also provide services and customized applications for plant data collection, analysis and plant performance management.
